**TARGETS PARTICLES**

When these ions disperse throughout a space, such as an office or a schoolroom, they combine with particles suspended in the air. This creates a snowball effect in which particles of opposite polarities begin to cluster together, which makes them

**TACKLES ODORS**

GPS' NPBI technology breaks down chemical, pet, cooking and other odors into basic harmless compounds, leaving indoor air smelling fresh and substantially reducing odor-causing VOCs.

**REDUCES PATHOGENS**

During the NPBI process, contact with ions disrupts pathogens' surface proteins, rendering them inactive and unable to replicate.

**WHAT IS OZONE?**

Ozone, or O<sub>3</sub>, in the upper atmosphere is formed naturally and protects Earth from harmful UV radiation. Ground-level ozone is primarily man-made and is harmful to breathe. Certain types of ionization products produce ozone, but GPS' NPBI technology does not.
